INTERLOCKING PANEL

DATA SHEET

INTERLOCKING PANEL

The latest addition to the innovative Revolution Roofing product range - EuroPlus Interlocking Panel - part of the new EuroPlus Series.

The EuroPlus Interlocking Panel is a sleek wall cladding option which provides clean lines through a recess joint and concealed fixings.

A variety of applications are available as the panels can be fixed vertically or horizontally as a wall cladding, or as a soffit panel.

When installed correctly, it provides the perfect solution for a wall cladding for both commercial and residential structures.

SUBSTRUCTURE DETAILS

Top Hats or Battens should have a maximum centre of 600mm, should be on a level plane and be placed at right angles to the panels.

Alternatively the EuroPlus Interlocking Panel can be installed on a 15mm plywood; ensuring the plywood is fixed on a level plane and with particular attention paid to the butt joint of two plywood sheets.

Oil Canning is an inherent characteristic of non-ferrous metals with broad flat areas. The Architect, Builder, and Homeowner needs to be aware that oil canning may affect the overall aesthetic outcome. There are measures that can be taken during design and installation to minimise the risk of oil canning such as ensuring the plywood is flush, the panels are fixed vertically, limiting the continuous length of each panel, and reducing the size of the pan.
